Dear customers,

More than 100 years ago in Chicago, Vinzenz Mueller started a small storefront business to provide physicians and surgeons with fine instruments and exceptional customer service. Mr. Mueller was guided by the principle that keeping all promises made to his customers - even if at a cost - was essential to the long-term success of his business. Since then, V. Mueller® has set the standard for service in the industry, which is still part our company culture today.

The tradition of making fine surgical instruments continued when William Merz started as an instrument apprentice for Mr. Mueller in 1928. Driven by the idea of improving the lives of patients, Mr. Merz used his specialized knowledge and skills to translate surgeon problems or ideas into more efficient surgical instruments. His passion for advancing quality surgical instrumentation helped build his reputation as one the best-known instrument makers in the world.

We are thankful for the thousands of innovative surgeons, operating room and sterile processing professionals, and other healthcare personnel who have collaborated with us to develop our high-quality, innovative new products. Today, the V. Mueller and Snowden-Pencer instrument lines include more than 25,000 instruments used in hospitals across the globe.

We are also proud of our craftsmen and supporting staff who continue our tradition of providing high-quality surgical instrumentation and customer service for customers everywhere.

William Merz

Reputation

Our standards of quality originated with our founder, Vinzenz Mueller. In 1893, he brought the knowledge of German instrument craftsmanship to the United States and established a tradition that has carried through to today. His protégé, William Merz, established the V. Mueller name as one synonymous with innovation and collaboration.

In 1951, Leonard Snowden and George Pencer introduced the revolutionary tungsten carbide insert to the jaws of surgical instruments. CareFusion is now proud to offer the Snowden-Pencer family of products to our customers.

These men dedicated their lives to improving surgical instruments and patient care. Our customers have always expected high quality and first-rate technology from our surgical instruments, which are promises CareFusion continues to deliver on today.

William Merz started the V. Mueller tradition of working closely with well-recognized surgeons to develop surgical instruments used all over the world.

These surgeons have included Adson, Atkinson, Bailey, Balfour, Barraquer, Baumgartner, Beckman, Castaneda, Cooley, Cosgrove, Cottle, Crile, Cushing, Davis, Debakey, Derf, Finochietto, Glassman, Hibbs, Jackson, Jacobsen, Jannetta, Kelly, Lalonde, Mars, Mayo, McCulloch, McPherson, Merz, Metzenbaum, Mueller, Paparella, Pierse, Potts, Ramirez, Rhoton, Rochester, Spetzler, Tebbetts and Webster.

Commitment

At CareFusion, our commitment to quality stems from our ability to understand customer needs and exceed industry expectations.

Our sales force has more than 125 knowledgeable V. Mueller representatives, some with more than 30 years of experience. Also, our V. Mueller and Snowden-Pencer customer support team ensures accurate order processing and technical support. We are all here to help.

Once our products are in your hands, our service quality does not stop. We offer many opportunities for continuing education. Plus, all of our surgical instruments are backed by a lifetime warranty against defects in materials and workmanship.

Quality

CareFusion prides itself on the quality craftsmanship of our V. Mueller and Snowden-Pencer surgical instruments. Though technology has progressed over the years, all of our instruments maintain a handcrafted component.

We know that small details make a real difference in the hands of surgeons. That is why we consider our surgical instruments an art form and attention to detail critical. This mindset and pride ensure our surgical instruments are among the highest in quality.

Our entire manufacturing process reflects our dedicated specializations through:

- Training instrument craftsmen by apprenticeships
- Inspecting instruments for quality throughout manufacturing

- Placing instruments under several stages of heat treatment, followed by quick cooling to achieve the proper hardness and strength
- Deep cleaning instruments, and preventing their corrosion by passivation

We have also proudly maintained a manufacturing presence in the United States for more than 115 years. With state-of-the-art manufacturing and operational facilities in St. Louis, MO; Tucker, GA; Cleveland, OH; and Tuttlingen, Germany, our quality instruments are manufactured under consistent standards by highly skilled individuals.

“We give the best to our customers by doing a microstructure evaluation of the raw materials. This helps ensure that what our customers are getting in their hands is a good product.”

Joe Torok
Principal Scientist/Metallurgist
CareFusion

Innovation

The V. Mueller and Snowden-Pencer brands have a history of developing recognized innovations, including:

- The tungsten carbide insert process, enabling a superior grasping technique
- Snowden-Pencer laparoscopic hand instruments, incorporating the finest instrument jaw patterns with ergonomically contoured handles to better fit surgeon hands

CareFusion continues to embody this philosophy of innovation. We deeply understand our customers' needs by working closely with our surgical and clinical advisory boards.

Our research and development team of engineers uses modern computer-aided design, analysis tools and specialized test laboratories to produce high-quality, innovative designs. They then hand over these validated designs to our manufacturing team. These experienced craftsmen incorporate handcrafting with advanced machinery such as CNC mills and lathes to consistently deliver some of the highest-quality instruments on the market. In effect, every new product we release is built with the same superior standards that our customers have come to expect for the last 115+ years.

V. Mueller product warranty

We warranty each medical device and accessory bearing the V. Mueller and Snowden-Pencer brand names to be free of functional defects in workmanship and materials when used normally for its intended use. Any V. Mueller product proven defective will be replaced or repaired at no charge. Repairs or modifications performed by unauthorized personnel may void all product warranties, or affect device performance and efficacy.

CareFusion employees are our own toughest critics. From reviewing production at every stage to demanding test procedures in our development and production processes, we insist on providing quality instruments you can trust. That is why all of our instruments bearing the V. Mueller name carry a lifetime warranty and provide personalized support from our V. Mueller sales representatives and customer support specialists.

The Snowden-Pencer Products Guarantee

All Snowden-Pencer instruments are guaranteed to be free of defects in material and workmanship.

In addition, the tungsten carbide insert is guaranteed against wear under normal use for five years on Diamond-Jaw, Micro Diamond-Jaw, Diamond-Points and Diamond-Edges instruments.

Diamond-SerEdge scissors are guaranteed against wear for three years.

Diamond-Edges Supercut and Diamond-Tip instruments are guaranteed against wear for one year.

After this guarantee period, service and maintenance are available for a nominal charge.

We have persevered for over a century to build and maintain a reputation for quality - and are proud to stand behind our work with a lifetime warranty. In 2001, the Mayo Clinic reported a broken instrument to their V. Mueller representative. As the representative inspected the instrument, he found an interesting mark: a date-stamp from October 12, 1955. The instrument was nearly half a century old. But bearing the V. Mueller name, it was covered by a lifetime warranty against defects in materials and workmanship. So, we replaced it at no charge - just another example of the V. Mueller reputation for quality and commitment.

Return goods policy

In general, returns are NOT authorized for:

- Any item older than 90 calendar days from the invoice date
- Any item purchased on a "special order" or custom basis
- Used, processed or sterilized instruments, apparatuses or equipment
- Expired or non-expired items with missing or damaged labeling or packaging
- Sterile merchandise without all manufacturer seals intact
- Vibratory-etched products
- Color-coded merchandise

Customer support

Authorized representatives

V. Mueller products are sold only by authorized V. Mueller representatives. All instruments and equipment of our manufacture bear the V. Mueller trademark.

For more information, please contact your sales representative, send an email to GMB-VM-Europe@carefusion.com or visit carefusion.com/vmueller.

Snowden-Pencer brand Diamond-Jaw needle holder

Diamond-Jaw needle holders feature hard, sharp diamond-cut teeth in inserts of hardened tungsten carbide bonded to the jaw - the durable grip helps prevent rotation or slippage

Available with five different jaws inserts, including 7,000 teeth/in with extra-fine diamond-cut teeth for use with delicate suture and the Micro Diamond-Jaw, which offers carbide particles bonded to the jaw to create a textured surface for fine suture.

				
2,500 teeth/in	4,000 teeth/in	7,000 teeth/in	Micro Diamond-Jaw	Smooth
Large-size diamondcut teeth for use with heavy needles and suture (4/0 and larger)	Medium-size diamond-cut teeth for use with fine suture (3/0 to 6/0)	Extra-fine diamondcut teeth for use with only delicate suture (5/0 to 8/0)	Carbide particles metallurgically bonded to jaw for a fine textured surface that helps atraumatically handle delicate suture (6/0 and finer)	Smooth tungsten carbide surface for reducing damage to delicate needles and suture (6/0 and finer)

Snowden-Pencer scissors

Snowden-Pencer Super Cut scissors are sharper than conventional stainless steel scissors because the tungsten carbide cutting blade is razor-edged. Designed to provide accurate forward cutting and outstanding control.

Snowden-Pencer brand Diamond-Edges scissors feature high-quality tungsten carbide inserts that are diamond ground and honed to a precise edge for excellent cutting action.

Snowden-Pencer brand Diamond-SerEdge scissors allow for a clean, precise cut of dense tissue - the Diamond-cut micro serrations on the lower blade help prevent tissue slippage.

Snowden-Pencer titanium instruments

Titanium instruments provide significant sensitivity when working with fine tissue and sutures. Titanium instruments are designed to be very light, strong, anti-magnetic, radiopaque and virtually non-corrosive.

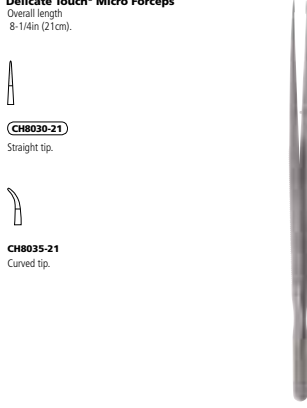

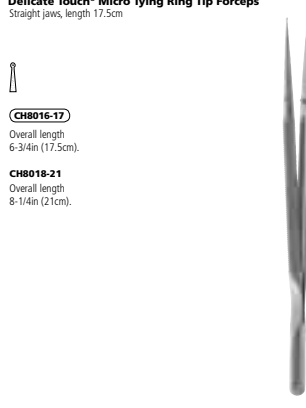

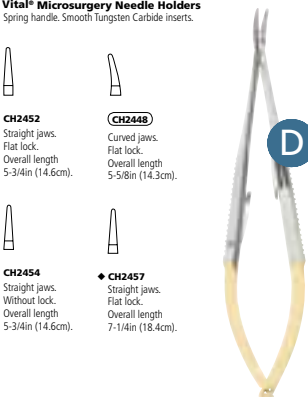

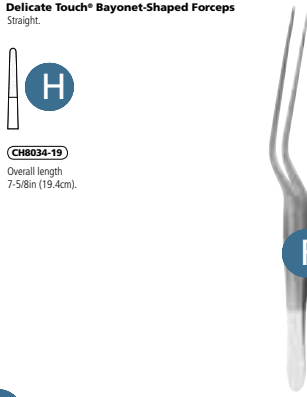

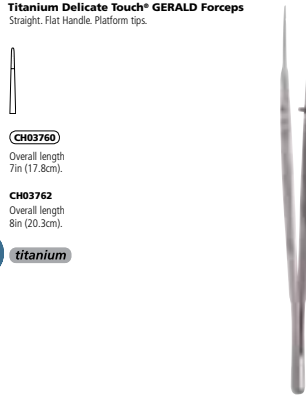

How to use this catalog

Use this key to easily understand the information throughout this catalog, as indicated in the sample pages below:

- A.** This catalog is divided by surgical specialty and instrument type.
- B.** Each page has its own ruler marked in inches, centimeters and millimeters.
- C.** Category names appear in English, French, German, Italian, Japanese, Portuguese and Spanish.
- D.** A diamond symbol **◆** denotes the most popular instrument within a category.
- E.** An oval **CH2461** around a catalog number denotes that item is pictured.
- F.** **titanium** denotes titanium instruments.
- G.** Our toll-free phone number appears on every other page for your convenience.
- H.** Illustrations of tip and jaw patterns appear next to the instrument.

Notes

- The alphabetical and numerical indexes at the end of this catalog can help you locate instruments by name, type or catalog number.
- All instruments are surgical stainless steel unless otherwise specified.

How to measure instruments

The following measuring definitions can help you choose the right instruments for your needs:

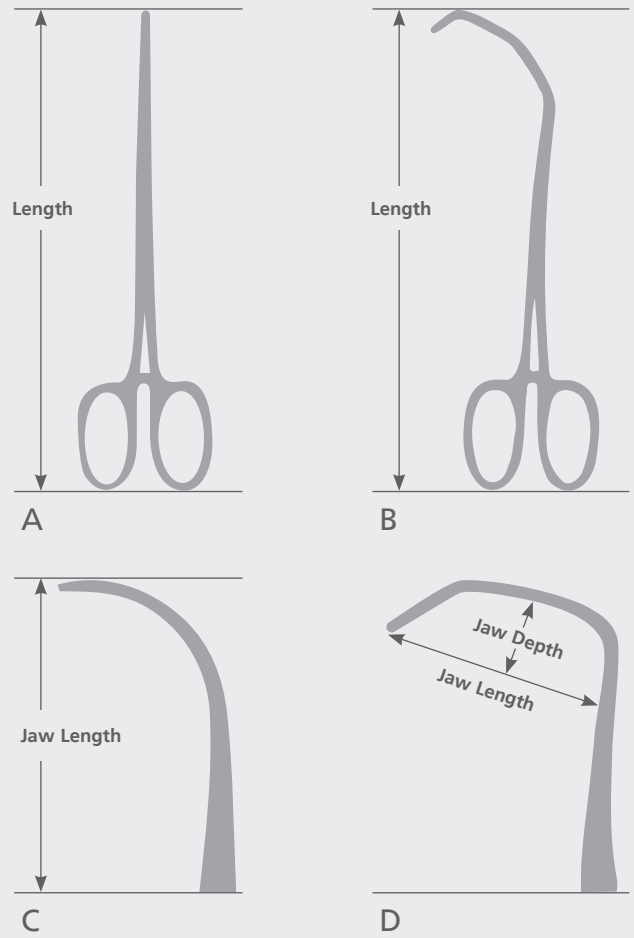

Length

Length is measured in a straight line from the bottom of the instrument to the tip farthest away (A). On curved and angled instruments, the length is determined by a line drawn from the bottom of the instrument to the tip farthest away (B).

Jaw length

In clamps, the usable portion of the jaw is measured in a straight line to the bottom of the serrations (C). On partial occlusion clamps, the jaw length and jaw depth are measured as illustrated (D).

The dimensions listed are accurate as of this catalog's publication date. Slight variations may occur due to metal crafting and finishing operations. Jaw and tip illustrations are approximately actual size unless otherwise noted.

Conversion table

Inches to centimeters	Multiply inches (<i>as decimals</i>) by 2.54
Centimeters to inches	Multiply centimeters by 0.3937
Millimeters to inches	Multiply millimeters by 0.03937

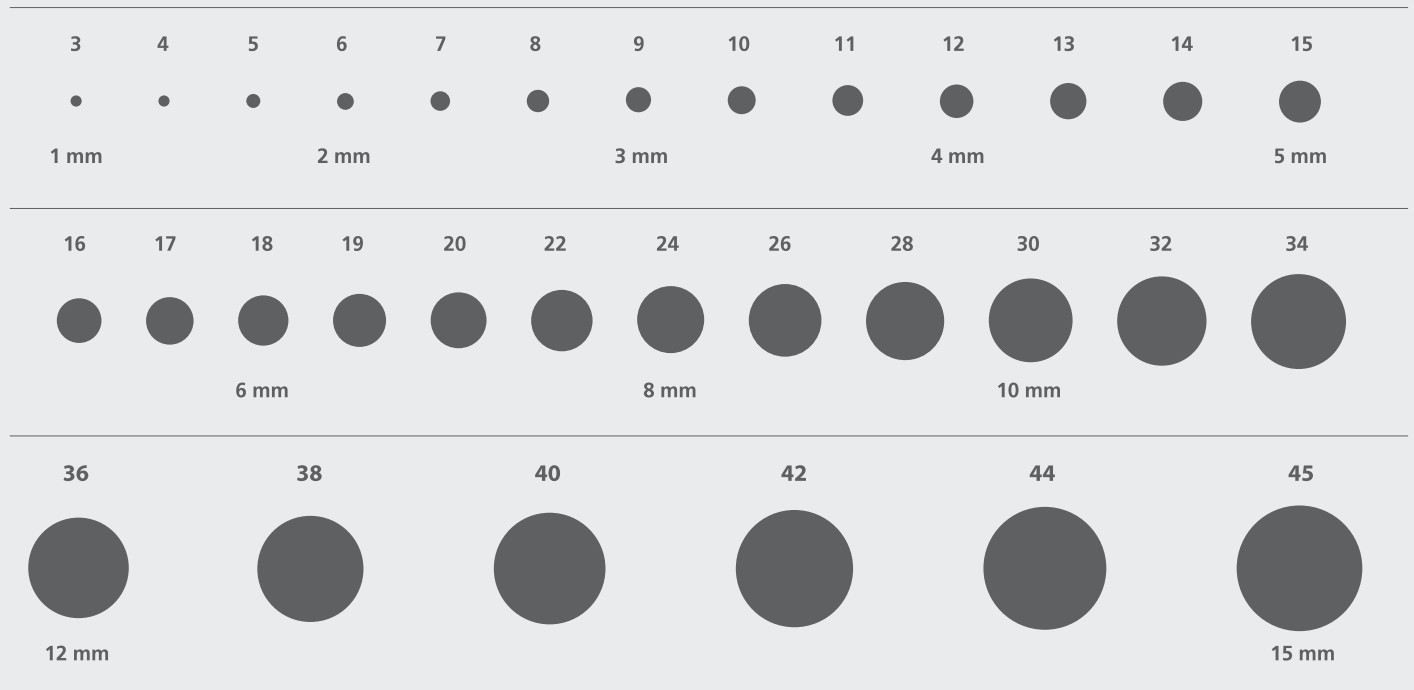

Inches	Millimeters	Inches	Millimeters
1/16	1.588	9/16	14.288
1/8	3.175	5/8	15.875
3/16	4.736	11/16	17.463
1/4	6.350	3/4	19.050
5/16	7.938	13/16	20.638
3/8	9.525	7/8	22.225
7/16	11.113	15/16	23.813
1/2	12.700	1	25.400

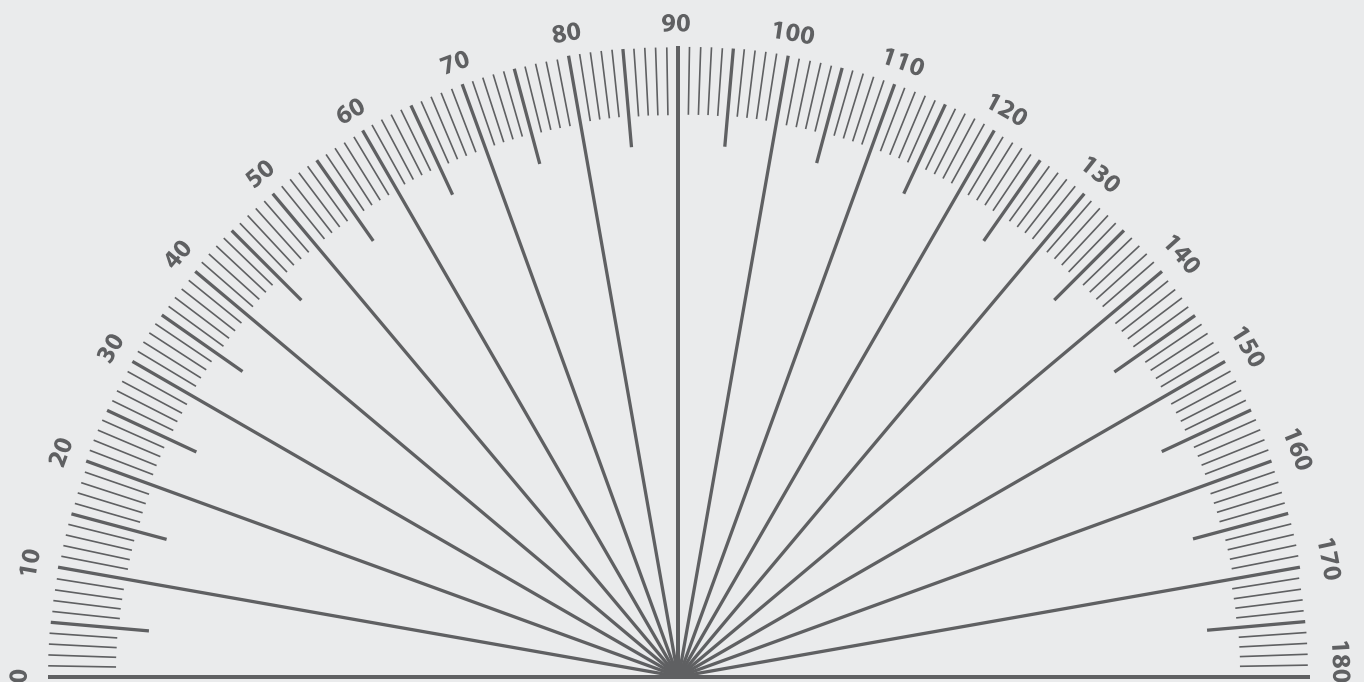

Standard French (Charriere) gauge

The standard French, or Charriere, scale (Fr) is generally used in the size calibration of catheters and other tubular instruments. Based on the metric system, each unit is approximately 0.33 mm, differing 0.33 mm in diameter between consecutive sizes.

Example: 15 Fr indicates a diameter of 5 mm, and 30 Fr indicates a diameter of 10 mm.

Instrument angles

Protect your surgical instrumentation with Genesis™ containers

Protect your valuable surgical instrument investment with the V. Mueller brand Genesis container system - the name you trust in the OR. The Genesis container system was designed with hard-coated anodized aluminum to protect and maintain the sterility of your surgical instrumentation. Available in a wide range of sizes, the Genesis container system offers a variety of baskets and accessories to help you organize and speed the set-up of your instruments. The Genesis container system consistently provides a return on your investment and a green alternative to sterilization wrap.
