

V. Mueller® instruments Cosgrove flex clamps

Cosgrove flex clamps from V. Mueller instruments have flexible shafts that bend and contour, yet they perform with the reliability of traditional rigid clamps.

V. Mueller®

Two flex clamp choices

We offer two choices in Cosgrove flex clamps. When a tighter bending radius and maximum flexibility are important, choose the Quick Bend™ model. The Quick Bend flex clamp has a shortened neck that bends closer to the jaw for a tighter bending radius to give you even greater flexibility.

And, when the width of the clamp head is key for working in small incisions, the Slim Fit™ model is the right choice for your needs. The Slim Fit flex clamp has a slender clamp head that permits use in narrow incisions.

To activate, just position and ratchet. The flex clamp becomes rigid and locks in place.

Cosgrove flex clamp features

- Strong, flexible, reliable shaft constructed of beaded stainless steel
- Enough clamping force for total aorta occlusion without excessive pressure
- Wide jaw opening for a secure grasp of all vessels
- Gap between shaft beads to allow for thorough cleaning
- Familiar ratchet design handle
- Slim design excellent for use in minimally invasive procedures

The power of partnership

The Cosgrove flex clamp was developed in conjunction with Dr. Delos Cosgrove and the Cleveland Clinic through the V. Mueller Custom Signature Service® program. The Cosgrove flex clamp is just another example of our commitment to innovation and to working closely with surgeons.
